

PAYROLL SERVICES

With the numerous tax changes surrounding the payment of salaries, collection of superannuation and management of benefits, the role of payroll management is one of the most time-consuming areas of financial outsourcing experienced.

It's no wonder that For Purpose organisations often experience difficulty in managing the payroll function consistently and reliably.

An experienced outsourced company can change all of that.

The roles which are often outsourced are:-

- Calculating payroll including employee claims
- Establishing cloud records for new employees
- Adopting consistent systems for leave authorisations
- Make requests for transfer for payroll payments
- Ensuring the system complies with the requirements of Single Touch Payroll and SuperStream.
- Manage all payroll explanations
- Management of FBT
- Preparation of draft activity statements
- Preparation of payroll tax returns if applicable
- Preparation of WorkCover renewal notices
- Salary packaging

The outsource services including payroll services removes one of the most demanding components of the financial system for administrative staff.
